Restyling Visualization Exercise 1

Design Brief · PPOL 5202 · Who Builds Federal AI?

Guo (Nora) Zhan

2026-10-19

Before and after

The same data and the same finding: “Before” is the figure I submitted for Exercise 1, and “After” is the same figure rebuilt with my project theme (`theme_project.R`).

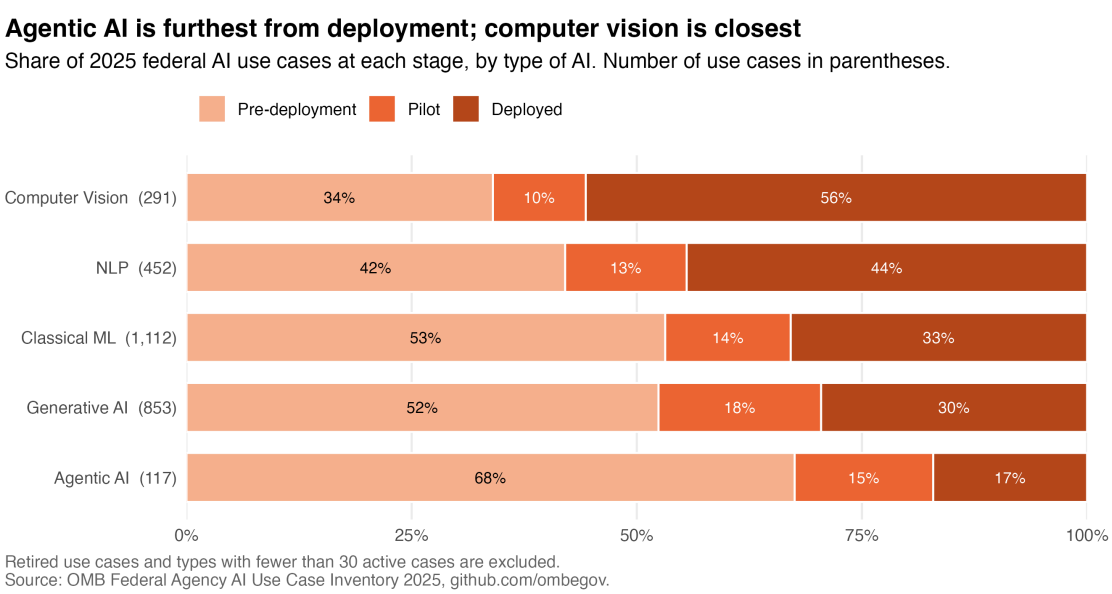

Figure 1: Before: Exercise 1 as submitted

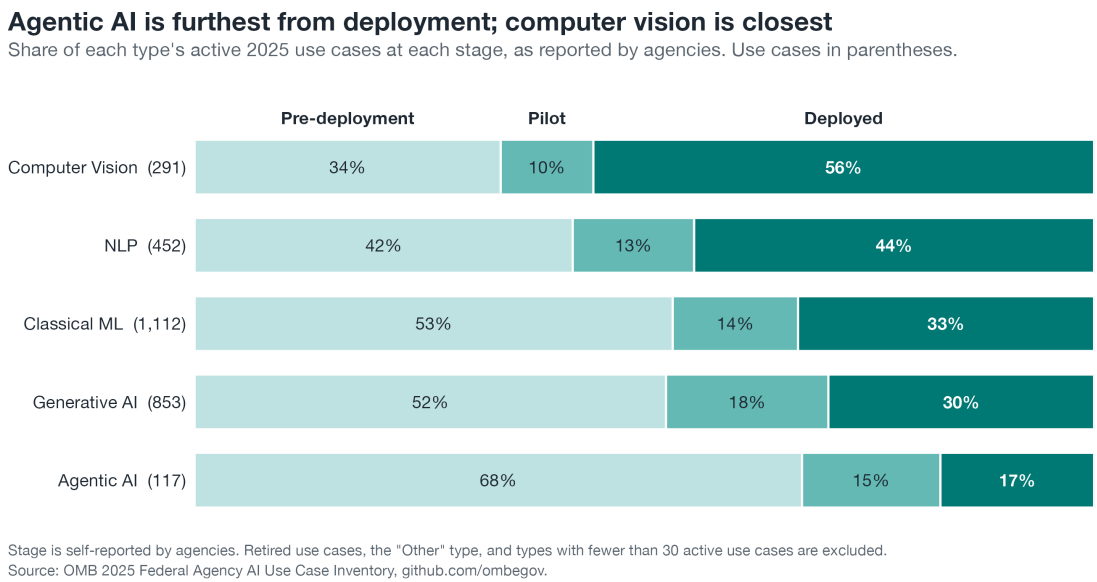

Figure 2: After: rebuilt with the project theme

Revision memo

The data, the filters, and the main finding stay the same. Every percentage matches Exercise 1. I changed five things:

1. **Orange became teal.** In my project, teal is the color for the AI itself, and the warm coral means “bought from a vendor” (convention 2). Orange stage bars would look like vendor bars. Teal still runs from light to dark, so darker still means further along, and the order holds up in the color-blindness test. Teal also has no link to the red and blue that U.S. readers tie to political parties.
2. **The legend became labels on the chart.** The stage names now sit right above the top bar, so busy readers do not have to look back and forth between a legend and the bars.
3. **The percent axis is gone.** Every part of every bar already shows its number, so the axis only repeated it.
4. **The deployed numbers are bold.** The title is about deployment, so that is where the eye should land first. Only one thing is emphasized.
5. **The notes are clearer.** The subtitle now says “as reported by agencies” (convention 4), and the caption says agencies report stage themselves (convention 3) and lists everything left out (convention 1).

Fonts, sizes, and colors now come from `theme_project()`, so this chart matches the rest of my project.
